Counting Islands

Write - up :

```
for  i → o to x
     for j → o to y
          if arr [i][j] == o
               continue
          else
               check the surroundings
               if 1 is found add it to set

     for i → o to x
     for j → o to y
          if a[i][j] == 1
          check in the sets
          if present
               no. of _islands ++

return no. of _islands
```
